It doesn't look as though you guys were copied on this (though Anthony Leung was).

Subject: Plume Monitoring Well Results

Paul,

I received a call from Lora Fly this morning. The monitoring wells associated with VPB 151 which are just north of the Southern State Parkway and west of 135 have come up with 7-8 ppb of TCE. This was confirmed several times during May & June. The depth these wells are 730-755 ft. This is significant information for MWD as these are the highest confirmed concentrations found to date at such a southern location.

Please give me a call to discuss today. Thank you.

Stan Carey, Superintendent
Massapequa Water District
